

## Case study: Platforms/build plates for 3d metal printing

### Objective:

The customer requests Ti platforms for his 3d printer manufactured according to his technical drawing with a short lead time.

### Hempel Special Metals, solution and customer benefit:

As a stockholder of Ti plates Hempel offers short lead times and competitive prices. The certified service center does water cutting and laser cutting in-house. Thus first blanks can be efficiently and reliably manufactured which serve as basic material for further manufacturing steps. The network of Hempel to contract manufacturers allows a reliable and in-time manufacturing and delivery of the platforms.

Besides platforms, Hempel offers metal powders and wires for additive manufacturing.
